

Full Denture or Partial Denture

I realize that Full, Immediate or Partial Denture are replacement for missing teeth, and as such they do not function the same as natural teeth. The problem of wearing these appliances has been explained to me, including diminished chewing ability, altered speech, sore spots, loosening of the appliance, shrinking bone and gums, and possible breakage of the appliance. Dentures are not “permanent” and may require a relines or “refitting” in the future. Both patients with some or no teeth will still need to have regular Oral Exam to re-evaluate the remaining teeth, examine the oral tissue for pathology, and confirm a proper fitting denture. I realize wearing a poor fitting denture can encourage excessive bone and tissue loss in the denture are so these periodic exams are essentials to optimum oral health. During the fabrication of any denture, I will have the opportunity to change the color, shape, and size of the teeth at the “wax try-in”. Any changes proposed by me AFTER this step can be made at an additional fee, for which I am responsible. **Immediate Dentures** (placement of a denture immediately after removal of teeth) in addition to the above information, I understand that this type of denture may be quite uncomfortable for several days and may require several adjustments and/or relines within several months. I also accept the look, color, and overall appearance of my denture/ partial and give my permission to the doctor to process my denture. I have had an opportunity to ask my questions about any of these procedures.
